

Deploying OpenOffice.org

Installation and Configuration in a Corporate Network

Linux-Kongress Nuremberg September 23rd, 2010

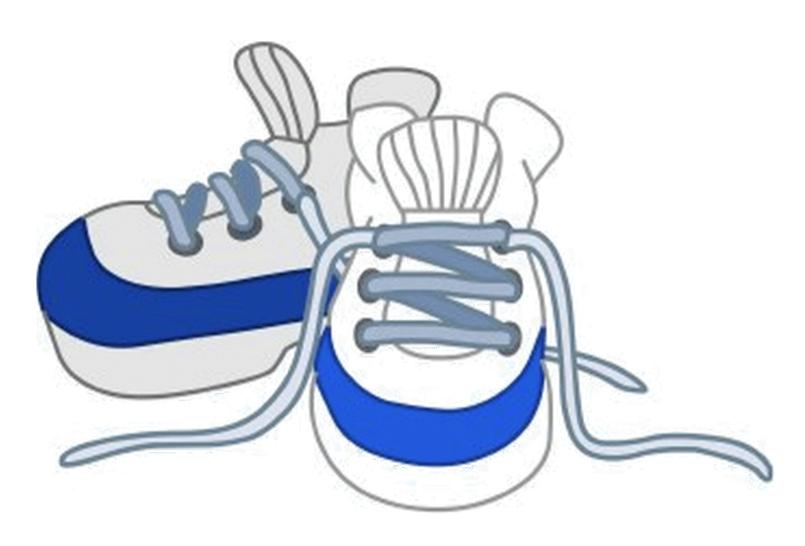

- Volunteer in the OpenOffice.org community since 2004
- Marketing Project Lead
- Board of Directors at OpenOffice.org Deutschland e.V.

Houston, we have a problem!

You know these?

The shoe image is courtesy of DailyClipArt.net and subject only to their license. It is neither licensed under FDL nor PDL.
Used in this presentation with their permission.

- "Sneakernet"
 - Software is installed once and will never be updated (i.e. neither fixes nor features)
 - Administrator "walks" from client to client
 - No consistent configuration
- Solutions
 - Workstation cloning (imaging)
 - Setting up a terminal server
 - Software deployment and configuration management

A bit of theory...

- How it works
 - All packages are on the server
 - Software database for each client
 - Installation over the network without user interaction ("silent")
- Problems
 - Software must be a "package"
 - Distribution needs bandwith
 - Nontheless best solution

- Windows
 - Software not always packaged (MSI)
 - Different (and ugly) setup routines
 - Built-in deployment only with server
- Linux
 - Most software available as package
 - Mainly problems with legacy software
 - Contains basic software deployment

- Intention
 - Senseful defaults for broad user range rather than "every man for himself"
 - Help supporters and trainers
 - Locking of specific settings
 - Security policies
- Scope
 - Global ("domain wide")
 - For machines or groups
 - Per user

- Basics on Windows
 - Group policies via Active Directory
 - Registry keys
 - Configuration files
- Basics on Linux
 - Configuration in /etc and /home
 - LDAP backend

In medias res

- Software deployment
 - DEB and RPM for Linux, MSI for Windows
 - Usable with most deployment toolkits
 - Extension deployment with unopkg
- Configuration management
 - XCU files (XML Registry Update Format)
 - Platform-independent format and syntax
 - Nearly all settings are stored as XCU
 - Applies also to extension configuration
 - Parts can be stored in LDAP

- "Silent" installation and updates possible
- Please do not package yourself!
- MSI properties for settings like
 - Installation path
 - Components to be installed
 - MS Office file associations
 - Desktop icon

Example for Windows

Windows Installer

File types and desktop icon

Do not install
Quickstart
and
Online Update

start /wait
msiexec /qb /norestart /i
openofficeorg32.msi
REGISTER_NO_MSO_TYPES=1
REGISTER_DOC=1
CREATEDESKTOPLINK=0
INSTALLLOCATION="C:\000" Destination
ADDLOCAL=ALL
REMOVE=gm_o_Onlineupdate,
gm o Quickstart

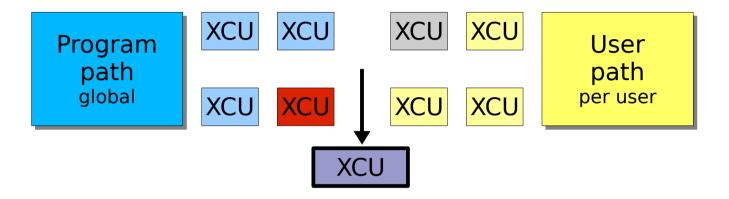

- Package and updates often already shipped by the distributor
- "Community Build" as DEB and RPM
- Installation is always "silent"

Global setting is the default,

as long as user doesn't configure something else

If so, the global setting

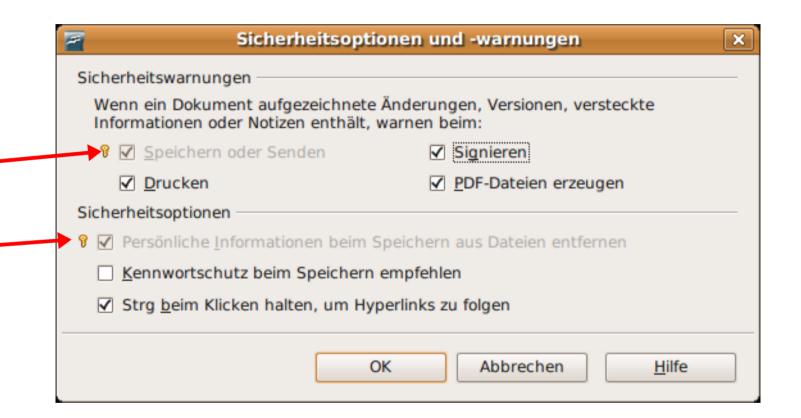

will be overwritten with the user's configuration

Locked settings are always mandatory

Features and functions can be disabled entirely

Configuration example

XCU syntax

Node 1st level

Setting

```
<node oor:name="Security">
oor:name="RemovePersonalInfoOnSaving"
oor:type="xs:boolean">
  <value>true</value></prop>
 oor:name="WarnSignDoc" oor:type="xs:boolean">
  <value>true</value>
 </prop>
 oor:name="WarnCreatePDF" oor:type="xs:boolean">
  <value>true</value>
 </prop>
 oor:name="WarnPrintDoc" oor:type="xs:boolean">
  <value>true</value>
 </prop>
 oor:name="WarnSaveOrSendDoc"
oor:type="xs:boolean" oor:finalized="true">
  <value>true</value>
 </prop>
</node>
</node>
```

- Configure with a test user
- Use resulting XCU files as template
- Copy them to the program path
- Remove path names and other personal settings
- Hint: XCU files can be deployed as extension

Some more examples

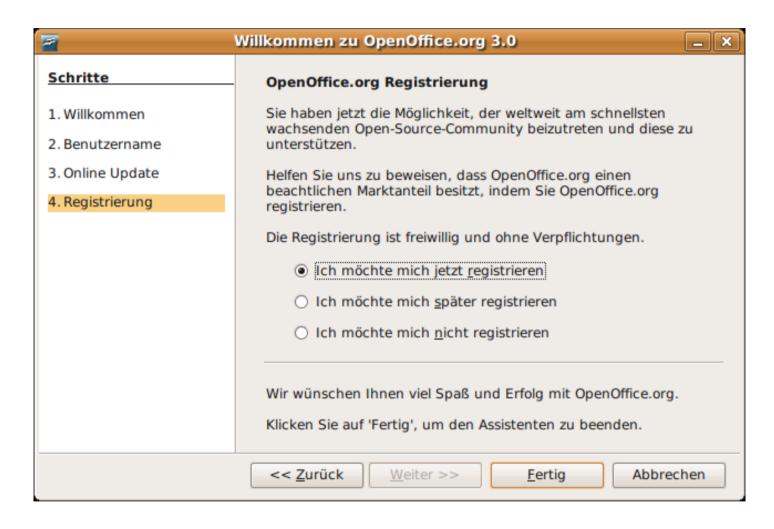

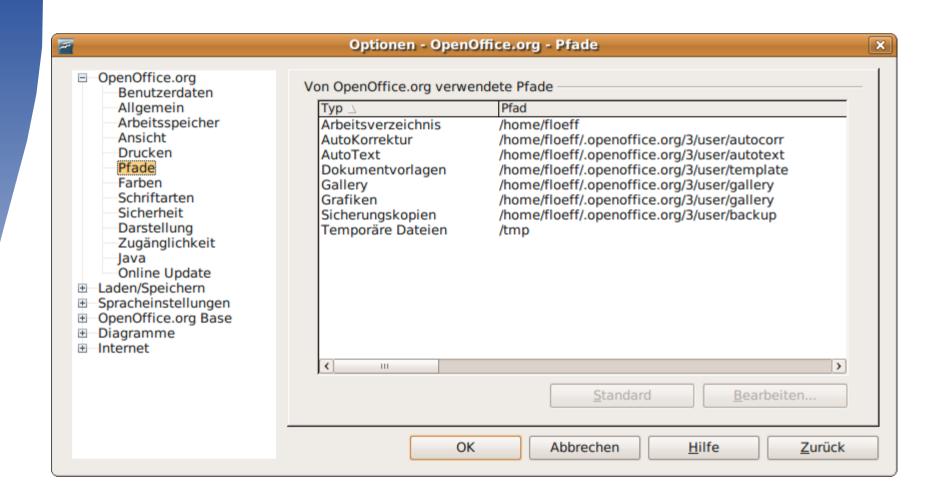

Disabling first start wizard

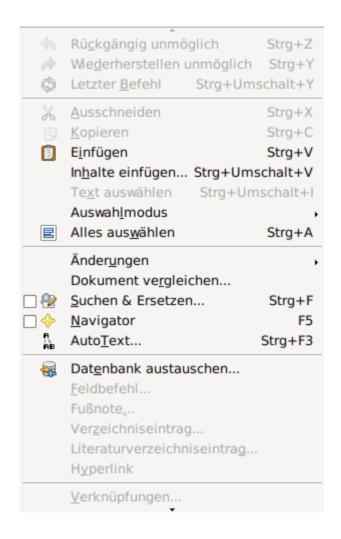

₿	E <u>i</u> nfügen	Strg+V
	In <u>h</u> alte einfügen Strg+Umschalt+V	
	Auswah <u>l</u> modus	•
	Alles aus <u>w</u> ählen	Strg+A
	Änder <u>u</u> ngen	•
	Dokument vergleichen	
	Suchen & Ersetzen	Strg+F
	<u>N</u> avigator	F5
AB AB	Auto <u>T</u> ext	Strg+F3
Q	Datenbank austauschen	
□ 🐗	<u>P</u> lugIn	

- Software deployment is a must
 - Up-to-date software
 - Common configuration
 - Security policies
- OpenOffice.org
 - can be easily deployed
 - its configuration is manageable
- Hint: free software deployment solutions are extremely powerful

Thank you!
